## Heuristic Evaluation UI Bugs

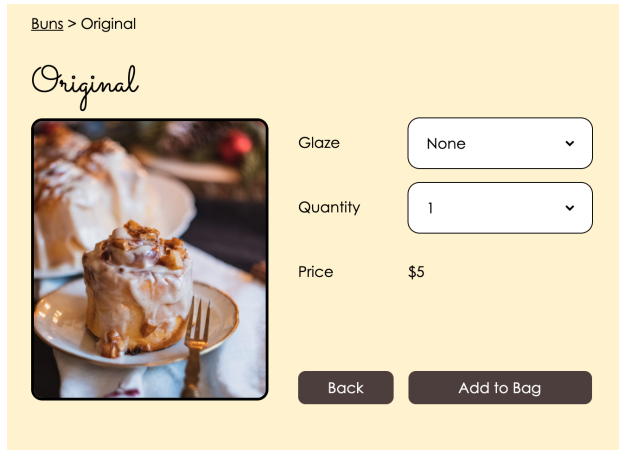

- Visibility of system status - “Add to Bag” Button should not be clickable until glaze is selected
  - Default glaze to “None” so that “Add to Bag” is always clickable

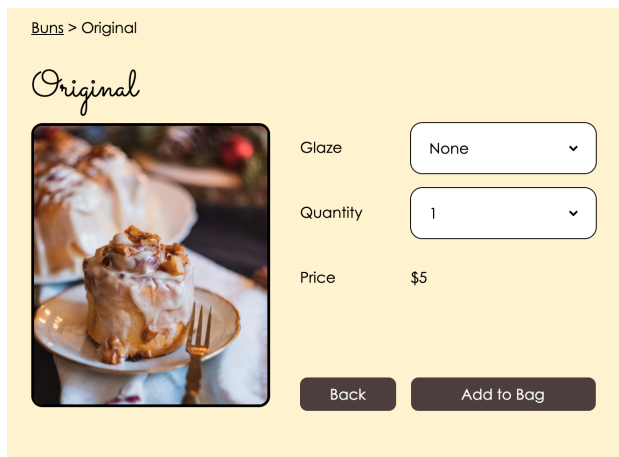

- Consistency - Buttons don't have consistent capitalization
  - Capitalize the first word in all buttons

- Consistency - Back button is first in “My Bag” but second in “Original Bun”
  - Have all back buttons be first

- Minimalist design - Price can be whole number if not using decimals

## Challenges

I think the biggest challenge was not using React to build the site since that is what I'm used to. I struggled with styling the select boxes since adding padding did not work, I had to use a white border and a black outline. Overall the HTML/CSS was not that difficult but cropping the image at specific points was new to me so it took more trial and error.

## Brand Identity

The brand identity of my client is a very aesthetic shop that is targeting social media influencers. I chose a warm coffee shop color palette so that it would feel cozy yet chic. The fonts I used were "Sacramento" which is a hand-lettered inspired script which gives it a friendly feel and "Century Gothic" which has elegant rounded letters that are easy to read. I tried looking for images that are clean and inviting. All images have curved edges to make them feel softer but at the same time, stand out with a black border.
